

Daikin Launches New intelligent Tablet Controller

Daikin's user-friendly centralised control solution with cloud connection delivers increased flexibility and comfort with improved energy savings through integration.

Daikin has announced the launch of a new dedicated smart control solution for light commercial, retail and high end residential applications. The new intelligent Tablet Controller provides centralised control for heating, cooling and ventilation, as well as third party integration with fire or security systems as window contacts, offering the potential to achieve significant energy savings.

A stylish, slimline tablet provides an intuitive interface with touch control operation. Connection through the Daikin Cloud Service allows remote access through any web-enabled device, with the capability to monitor and manage energy consumption for any size of business from a single location to multiple sites for maximum economy and comfort.

Total systems control

The new intelligent Tablet Controller enables total control of building systems from a single point via a simple touch screen, blending in with any décor to offer a discreet space-saving solution. The intuitive operation of the intelligent Tablet Controller makes the system easy to use, providing user flexibility while ensuring optimum energy efficiency.

Cost-effective, energy-saving comfort

The advanced control system offers a comprehensive management solution which has been purpose-designed to integrate a large portfolio of Daikin products to meet the needs of retail, banking and hospitality businesses.

Centralised control enables the system to be fine-tuned to meet the heating and cooling needs of different areas, from retail floors where customer comfort is a prime consideration to kitchens and storage rooms where a wider temperature band is acceptable.

The intelligent Tablet Controller's scheduling capabilities allow system settings to be adjusted to accommodate variable occupancy patterns during opening hours and pre-and post-trade. Maintaining comfort levels by operating ventilation heating and cooling as needed helps reduce running costs significantly. By adapting to changing seasons, the system also guarantees year-round climate control and optimal energy usage.

Operational flexibility with room for growth - The Daikin Cloud Service

One of the key attributes of Daikin's new intelligent Tablet Controller which sets it apart is its flexibility, which allows users to manage their premises climate according to individual business needs.

Daikin's recently launched subscription-based Cloud Service has been designed to simplify building monitoring and management, allowing building owners and managers to control the system remotely whenever and wherever they are, from any device. The availability of this option means system managers can choose between on-site or remote control or a combination of both, integrating HQ monitoring and local control requirements.

The Daikin Cloud Service enables remote access, allowing installers or engineers to monitor and control multiple premises remotely through a single system, and providing support without the need for site visits. Multi-site monitoring also enables building performance to be compared to identify areas of energy waste and optimise energy efficiency in premises with a heavy energy usage. Additional functionality and premises can be added at any time to meet changing business demands.

Launch Offer: To celebrate the release of the new Intelligent Tablet Controller, Daikin is offering a free one year subscription to the Daikin Cloud Service when an account is set up.*

Intelligent Control for residential applications

With its combination of local adjustability and central control, the Daikin intelligent Tablet Controller is ideally suited for use in managed residential developments. Residents have control over system settings in the home via the user-friendly and intuitive touch-screen tablet interface while the Daikin Cloud Service allows residents to activate their systems remotely from anywhere.

A tradition of innovation

Daikin's new intelligent Tablet Controller is the latest in a series of innovations developed to meet the comfort and operational needs of light commercial and residential applications. Developed at Daikin's dedicated European Design Centre, the latest range of products is designed to provide user-friendly and comprehensive solutions, helping to control energy consumption and offset rising energy costs.
